Dear Sir,

Drilling commences on prospective tungsten deposit in Northern Territory

Washington Resources Limited ("Washington" or "the Company") is pleased to announce that drilling has commenced on its Kurundi Project, 80km south of Tennant Creek.

The programme is targeting mineralization in halos surrounding high-grade, historic mine workings. Approximately 3,000 metres of aircore drilling will be used to test scheelite occurrences identified by ultraviolet fluorescence. This is the Company's first drilling programme to be undertaken in the area, and it is expected to be completed within the month.

Following completion of this programme, the rig will commence work on targets established by Northern Uranium Limited. Under the terms of the agreement with Northern Uranium, Washington retains non-uranium rights in the relevant area.
